

Digital Footprint Audit Report

Target: Example Inc

Risk Score: 100.0/100 | **Level:** Critical

Report Date:	July 27, 2026 at 04:06 UTC
Scanner Version:	0.1.0
Scan Duration:	5s
Total Findings:	26

CONFIDENTIAL — This report contains sensitive security information. Handle according to your organization's data protection policies.

Table of Contents

Executive Summary — Overview of security posture

Detailed Findings — All findings organized by severity

Remediation Plan — Actionable steps to address issues

Appendix — Technical details and references

Executive Summary

Overall Risk Score

100.0 / 100

Finding Type	Count	Status
Critical	0	■ Immediate Action
High	4	■ Urgent
Medium	5	■ Important
Low	10	■ Minor
Informational	7	■■ FYI

Assessment for Example Inc: This digital footprint audit has identified 26 findings across 4 categories. With a risk score of **100.0/100** (Level: **CRITICAL**), this presents opportunities for improvement. The findings below provide specific, actionable recommendations to address each issue.

Most Critical Findings

■ Domain Expiring Soon

The domain example.com expires in 16 days. Loss of domain control could lead to phishing or malware distribution impersonating your brand.

■ DNS Resolution Mismatch

The provided IP (104.20.23.154) does not match the DNS resolution (172.66.147.243). This could indicate DNS hijacking or misconfiguration.

■ Strict-Transport-Security (HSTS) — Missing

Forces browsers to use HTTPS, preventing SSL stripping attacks. Header 'strict-transport-security' is NOT set on https://example.com.

■ Content-Security-Policy (CSP) — Missing

Restricts which sources can load resources, preventing XSS and data injection. Header 'content-security-policy' is NOT set on https://example.com.

Detailed Findings

■ HIGH Findings (4)

Domain Expiring Soon

Category: Domain & DNS Severity: HIGH

The domain example.com expires in 16 days. Loss of domain control could lead to phishing or malware distribution impersonating your brand.

DNS Resolution Mismatch

Category: Domain & DNS **Severity:** HIGH

The provided IP (104.20.23.154) does not match the DNS resolution (172.66.147.243). This could indicate DNS hijacking or misconfiguration.

Strict-Transport-Security (HSTS) — Missing

Category: Security Headers **Severity:** HIGH

Forces browsers to use HTTPS, preventing SSL stripping attacks. Header 'strict-transport-security' is NOT set on https://example.com.

Content-Security-Policy (CSP) — Missing

Category: Security Headers **Severity:** HIGH

Restricts which sources can load resources, preventing XSS and data injection. Header 'content-security-policy' is NOT set on https://example.com.

■ MEDIUM Findings (5)

Certificate Expires Within 90 Days

Category: SSL/TLS Certificate **Severity:** MEDIUM

TLS certificate for example.com expires in 33 days. Plan renewal soon.

X-Frame-Options — Missing

Category: Security Headers **Severity:** MEDIUM

Prevents clickjacking by controlling iframe embedding. Header 'x-frame-options' is NOT set on https://example.com.

X-Content-Type-Options — Missing

Category: Security Headers **Severity:** MEDIUM

Prevents MIME-type sniffing attacks. Header 'x-content-type-options' is NOT set on https://example.com.

Permissions-Policy — Missing

Category: Security Headers **Severity:** MEDIUM

Controls browser feature access (camera, mic, geolocation). Header 'permissions-policy' is NOT set on https://example.com.

Multiple Domains on Same IP (114)

Category: IP & Network **Severity:** MEDIUM

IP 104.20.23.154 hosts 114 domains. Hosting many domains on a single IP means compromise of one site could affect all others.

■ LOW Findings (10)

WHOIS Information Exposed

Category: Domain & DNS **Severity:** LOW

WHOIS registration details are publicly visible. Consider enabling WHOIS privacy protection to mask owner information. Public WHOIS data can be used for social engineering and targeted attacks.

DNSSEC Analysis Error

Category: Domain & DNS **Severity:** LOW

Error checking DNSSEC: All nameservers failed to answer the query example.com. IN DNSKEY: Server Do53:127.0.0.53@53 answered SERVFAIL

DANE Not Configured

Category: Domain & DNS **Severity:** LOW

DANE is not configured. DANE adds an extra layer of security for email by tying TLS certificates to DNS.

Missing DNS Records: CNAME

Category: Domain & DNS **Severity:** LOW

DNS record type(s) CNAME are not configured for example.com. Missing records may indicate an incomplete DNS setup.

No CAA Records Found

Category: Domain & DNS **Severity:** LOW

No CAA records exist. Any CA can issue an SSL certificate for this domain, which could allow an attacker to create a valid certificate for your domain.

Referrer-Policy — Missing

Category: Security Headers **Severity:** LOW

Controls how much referrer info is sent with requests. Header 'referrer-policy' is NOT set on https://example.com.

X-XSS-Protection — Missing

Category: Security Headers **Severity:** LOW

Legacy XSS filter header (deprecated but still useful). Header 'x-xss-protection' is NOT set on <https://example.com>.

server — Information Disclosure

Category: Security Headers **Severity:** LOW

Exposes server software information. Value: cloudflare

Cloud Provider Detected

Category: IP & Network **Severity:** LOW

IP 104.20.23.154 appears to be hosted on Cloudflare infrastructure. Cloud-hosted services can be spun up and taken down quickly, making abuse harder to track.

No Reverse DNS

Category: IP & Network **Severity:** LOW

No reverse DNS record found for example.com.

■ INFO Findings (7)

Domain Age — Established

Category: Domain & DNS **Severity:** INFO

The domain example.com has been registered for 11305 days. An established domain age is a positive signal of legitimacy.

MX Records Configured

Category: Domain & DNS **Severity:** INFO

MX records found: .. Email routing is operational.

SPF Record — Hard Fail Configured

Category: Domain & DNS **Severity:** INFO

SPF record: v=spf1 -all SPF is properly configured with hard fail. This is the most restrictive and recommended setting.

DKIM Configured

Category: Domain & DNS **Severity:** INFO

DKIM (DomainKeys Identified Mail) is configured. This adds a digital signature to emails, verifying they haven't been altered in transit.

DMARC — Reject Policy Configured

Category: Domain & DNS Severity: INFO

DMARC record: v=DMARC1;p=reject;sp=reject;adkim=s;aspf=s DMARC is properly configured with reject policy. This is the strongest DMARC setting.

Valid TLS Certificate Present

Category: SSL/TLS Certificate Severity: INFO

Domain example.com has a valid TLS certificate.

IP Location — 104.20.23.154

Category: IP & Network Severity: INFO

104.20.23.154 is located in: San Francisco, California, US Organization: AS13335 Cloudflare, Inc.

Remediation Plan

Review and address all 3 remediation categories for Example Inc.

■ URGENT: Address 4 high-priority issue(s) within 48 hours.

■ PLAN: Address 5 medium-priority issue(s) within 1 week.

Schedule a follow-up scan after remediation to verify fixes.

■ HIGH — Address Within 24-48 Hours

These issues create significant risk and should be addressed promptly.

- Prioritize remediation in your next sprint.
- Assign ownership to specific team members.
- Monitor affected systems for signs of exploitation.
- Review access logs for unauthorized activity.

■ MEDIUM — Address Within 1 Week

These issues weaken your security posture and should be fixed soon.

- Add to your security improvement backlog.
- Plan remediation in the next development cycle.
- Monitor for changes that could elevate risk.

■ LOW — Address Within 30 Days

These are minor issues that improve security when addressed.

- Enable WHOIS privacy through your domain registrar.
- Include in regular maintenance tasks.
- Address during routine security reviews.

- Consider as part of ongoing security hygiene.

Appendix — Scanner Error Log

No scanner errors occurred during this audit.

This report was generated by FootprintScanner v0.1.0. For questions or additional analysis, consult your security team.
